

# FORMACIÓN CONTINUADA EN METABOLISMO Y NUTRICIÓN

Vol. 1, número 1, Febrero 2005

## SUMARIO

### Actualización

---

#### Aspectos prácticos de la nutrición parenteral periférica.

JM Culebras, G Martín Peña, A García de Lorenzo, JA Rodríguez-Montes.

#### Farmaconutrición.

JC Montejo González, J López Martínez

### Novedades terapéuticas

---

#### Utilidad de las dietas bajas en hidratos de carbono para perder peso.

MA Valero, M León Sanz.

### Comentarios bibliográficos

---

#### Coordinador: Pedro Pablo García Luna

- Meta-analysis of parenteral nutrition *versus* enteral nutrition in patients with acute pancreatitis.
- Bone turnover during inpatient nutritional therapy and outpatient follow-up in patients with *anorexia nervosa* compared with that in healthy control subjects.
- Malnutrition is an independent factor associated with nosocomial infections.
- Effects of a low-fat diet compared with those of a high-monounsaturated fat diet on body weight, plasma lipids and lipoproteins, and glycemic control in type 2 diabetes.

#### Coordinadora: Marcela González Gross

- Position of the American Dietetic Association: functional foods.
- Effects of differing phenolic content in dietary olive oils on lipid and LDL oxidation. A randomized controlled trial.
- Acute *Rhodiola Rosea* intake can improve endurance exercise performance.
- Diet, physical activity, and sedentary behaviours as risk factors for overweight in adolescence.
- No long-term benefits of supplementation with arabinogalactan on serum lipids and glucose.

#### Coordinadora: Julia Álvarez Hernández

- Refeeding syndrome in patients with gastrointestinal fistula.
- Dietary composition of pregnant women related to size of the baby at the birth.
- Very low fat (12%) and high monounsaturated fat (35%) diets do not differentially affect abdominal fat loss in overweight, nondiabetic women.
- Dietary fat acids affect plasma markers on inflammation in healthy men fed controlled diets: a randomized crossover study.
- Glucose-based total parenteral nutrition does not stimulate glucose uptake by humans tumours.

#### Coordinadora: Pilar Gomis Muñoz

- Efecto de las bolsas multicapa *versus* EVA en la oxidación de la nutrición parenteral.
- Selenium concentrations in maternal and umbilical cord blood at 24-42 weeks of gestation: basis for optimization of selenium supplementation to premature infants.
- Efficacy and safety of reteplase for central venous catheter occlusion in patients with cancer.
- Parenteral nutrition practices in hospital pharmacies in Switzerland, France and Belgium.
- The use of in-line intravenous filters in sick newborn infants.

#### Guías prácticas

- Recomendaciones y guías de la práctica clínica.

#### Libros

#### Test de evaluación
