What is nutritionDay?

...a worldwide initiative to fight malnutrition in health care institutions

The aim of nutritionDay worldwide is to improve knowledge and awareness of malnutrition in health care institutions and to overall enhance the quality of nutrition care.

...one of the largest international databases of hospitalized patients.

On a specific day every year hospital wards and nursing homes around the world collect their unit's anonymised data and upload it to the nDay database to receive a snap shot of their unit. Participation is free of charge.

...a continuous improvement circle

Each ward receives a feedback and benchmarking report of its own results and in comparison to the worldwide reference data. The report shows specific quality indicators of your nutrition care in an easy to interpret graphical format.

...a 1-day cross-sectional audit with outcome evaluation

Participation allows benchmarking, repeated participation enables continuous monitoring.
